

MANDEV TUBES

COPPER TUBES TO PAINT YOUR WORLD GREEN

**“LIFE IS FOR ONE GENERATION,
A GOOD NAME IS FOREVER”**

|| FAITH IS IN THE NAME ||

A promise for a beautiful tomorrow

“The future does not belong to those who are content with today. Rather, it will belong to those who can blend vision, mission and courage in a personal commitment.”

At Mandev Tubes, we believe in great respect to human values and imbibe the promise to serve our customers with integrity; through a variety of innovations, value for money, products & services and by applying thought day after day. Attempting to give back to the environment what we have taken from it, we aim to become the top most DHP grade copper tube producer in the country and gain global recognition.

The roots of a Glorious Legacy

Mr. Rajmal M Munot

He is the founder of Munot group, one of the leading enterprise groups of India as pioneers in copper tubes and renowned for excellent service to customer, he started with a copper tubes redrawing plant at umbergaon, India. Known as Mandev Tubes, it is due to his undying efforts we made our foray into the copper tubes industry in India.

Mr. Ramesh R Munot

With the constant growth in the copper tubes industry, we have also expanded our boundaries and double our capacity. This was possible due to grate support from Ramesh R Munot , the scion of the Munot Family.

The Support System

“If your vision is for a year, plant wheat,
If your vision is for a decade, plant tree,
If your vision is for a lifetime, plant people.”

Mr. Aditya R Munot

In 2013, the young face of the company, Mr. Aditya Munot the director of Mandev Tubes joined the company . He brings a unique set of dynamic ideas and concepts in our business . Proving his mettle, Mr. Aditya Munot bring dynamism with vision for sustainable growth.

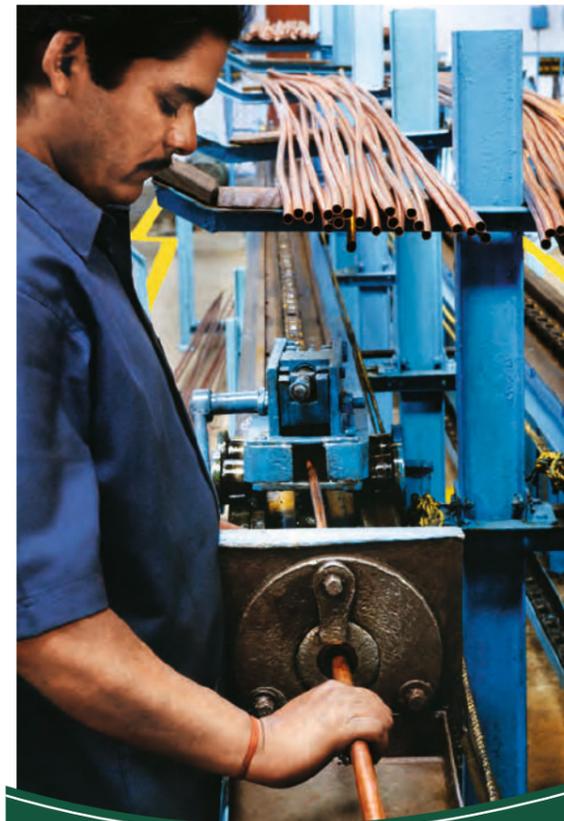

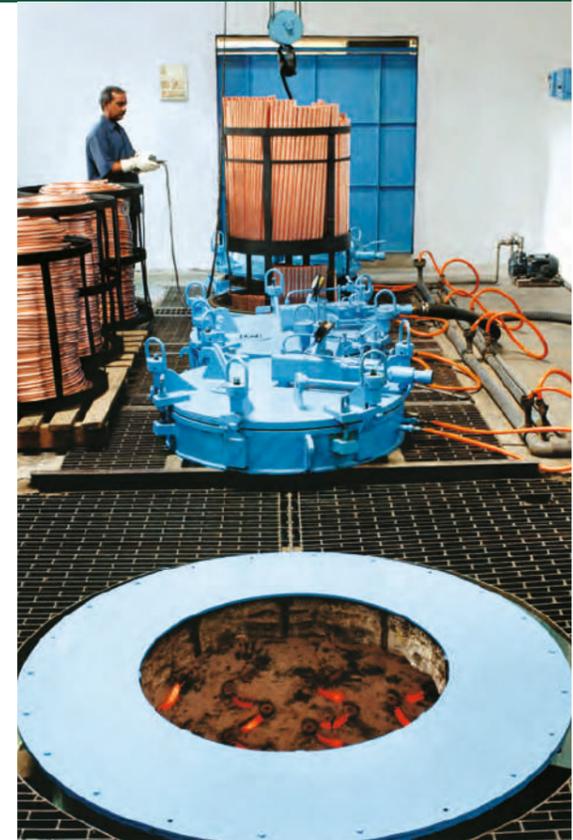

It's the people who are at the core of our entire structure. They are the strong branches who balance the organization. Our conducive atmosphere, brotherhood and affinity has attracted the talented from various places to be an integral part of our process. Our human resources is always innovating methods for excellent teamwork, ensuring that our people and business partners are always satisfied.

A fresh process to Refresh the World

"Commitment towards Quality and Total Customer Satisfaction."

Our burning desire to exceed perfection is met with expertise & intelligence. Our innovative & environment friendly process is all set to cool the world.

Process

- 1) Raw Material:** As per the customers' requirement we follow a strict chemical test report of every batch of raw material (made out of cathode, virgin material and red berry recycled wire). Correct chemical composition of this raw material is the most critical characteristic that determines the quality of finished tubes.
- 2) Drawing:** To get concentric thickness tubes, we make a finished tube of required dimensions, with precise floating mandrel.
- 3) Eddy Current Health Monitoring:** This equipment monitors the health of tubes, in various stages of manufacturing. A full body tube monitoring is done, using encircling coil eddy current technique on mother tube, in process tube & final tube. This give high confidence for the final tubes and eliminates in process discontinuities, by which we not only fulfil standards but also exceeds the requirement.
- 4) Bright Annealing:** The state-of-the art vacuum type inert atmosphere controlled furnace uses nitrogen gas to produce bright annealed soft tubes. It also maintains the inside surface with low residue level (i.e. 0.1mg/dm²).

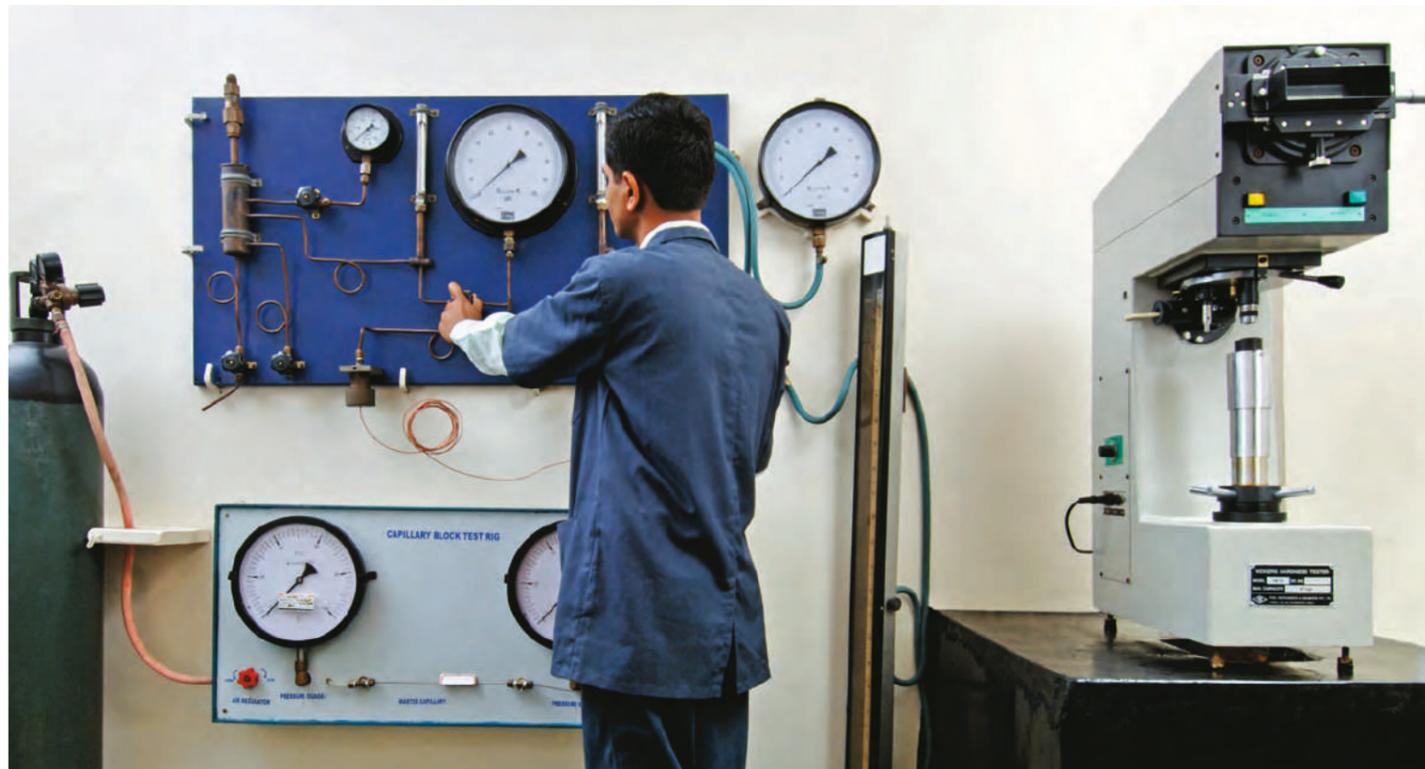

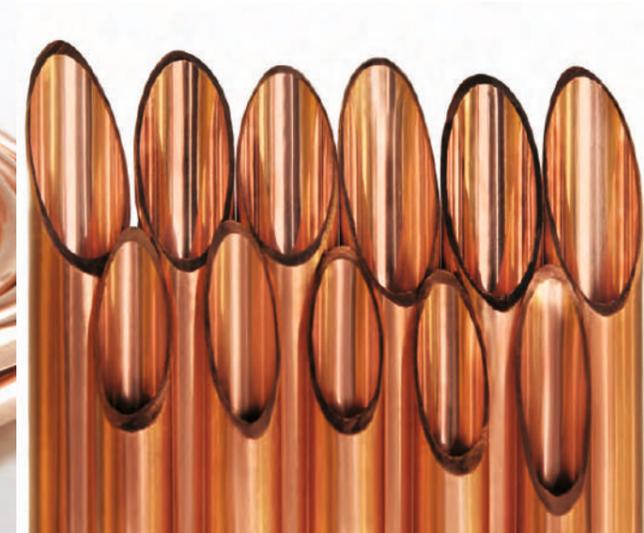

Sowing the seeds of Quality

We are committed to manufacture copper tubes, which satisfy the customer by way of consistent quality research and timely delivery. We believe in continuous improvement of product quality by implementing, maintaining & adhering to the quality management system in the organization.

Mandev is an ISO 9001:2015, 14001:2015, 18001:2007 certified company by URS and also its copper tubes are approved for "RoHS" and "ARAI" test. Mandev Tubes is a market driven company manufacturing products with the best technology, which adhere to the highest standards of quality. The additional feature of the quality assurance system is the SPC(Statistical Process Control)system. It involves continuous inspection of the tubes as they move down the manufacturing process line and data generated is used for continuous improvement in quality, instead of just inspecting the tubes at the end of the production operations.

Branching out the Expertise

Spread over a vast industrial area, is our prestigious plant at Umbergaon. A town in south Gujarat, it is 153 kms from Mumbai airport, With an eco-friendly plant and efficient machinery we are always innovating our products with time.

- Draw stations, to redraw 4 mm to 108 mm tubes & pipes.
- Inert gas atmosphere controlled bright annealing furnaces.
- Eddy current testing system – 6 mm to 108 mm.
- Chemical analysis, spectro and wet analysis.
- Mechanical laboratory for testing physical properties.

Safe-guarding the Earth,
Safe-guarding the People.

At Mandev Tubes, safety comes first. That's why every step we take is carried out keeping in mind the safety of our people. Plant and product.

Our main resource, our people are constantly trained to adopt the measures of safety. The plant is technologically adhered to prevent any kind of hazard and ensures safety. It is environment friendly and assures a green world. Rest assured; packaging, quality storing and marketing of our products are all done in a tried and tested method, to provide safety for our customers.

**Creating an
environment Friendly World**

Our contribution to the Society

At Mandev Tubes, it has been our constant endeavor to contribute towards the well being of the society. To make the world a better place.

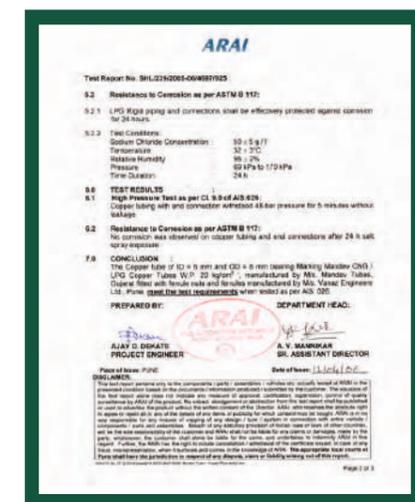

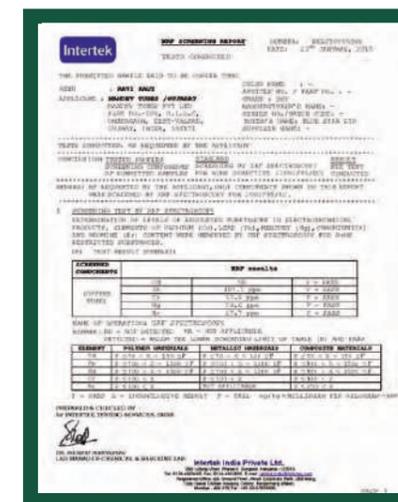

- Our dedication towards mother earth has inclined us to convert 50% of our land into a garden.
- Keeping in mind rural development, tribal women have been employed.
- Paying our respects to the Lord, we have placed 4 Jain idols in various temples.
- Organized Art of Living, Yoga & Meditation courses at Dadai village, Dist-pali, Rajasthan and Mumbai.
- To promote computer literacy, financial aid has been given to different schools in the country.
- Constructed animal hospital in rural areas of Rajasthan .
- Provided financial aid for bird hospital at Delhi.
- Provided water for the entire village and built many roads.

The fruits of Hard Work

That's not all, we have further augmented our copper tubes and making it CFC free refrigerant compatible for VRF and VRV units, Medical gas pipeline Systems, Refrigerators, Water Coolers, Visi Coolers, RACs, and other Air Conditioning applications. Our entire copper tube processing conforms to RoHS requirements. Our journey just doesn't freeze here, we will continue to draw a beautiful picture of the world. We will continue to cool the world while minimizing the impact on global warming.
